

ASPMF 730: ADVANCED ULTRASOUND-GUIDED REGIONAL ANESTHESIA TECHNIQUES IN ACUTE PAIN MANAGEMENT

This is the third in a series of five courses related to the perioperative management of pain. This course focuses on advanced regional anesthesia techniques used to optimize patient outcomes as either a primary anesthetic or as part of a multimodal pain management plan in situations when commonly used procedures are not possible because of patient comorbidities or the surgical procedure. The role of regional anesthesia for non-surgical pain management is examined as well as the utility point-of-care ultrasound (POCUS) studies in the perioperative management of patients.
