

ACADEMIC ISSUES

Advancement of each DNAP CRNA completion program student to the next higher level or semester occurs at intervals at the end of each semester upon faculty members' verification of the student's successful completion of each semester's course requirements. In order to progress unencumbered to the next higher level or semester, the student must meet the following conditions:

- MTSA expects that all DNAP level coursework should result in a minimum earned grade of "B".
- Students will automatically be dismissed from the program for receiving a failing course grade for any course. Failing is defined as any grade below 80%.
